

RELEASE NURSING CAPACITY WITH DIGITAL PRE-OPERATIVE ASSESSMENT FOR OPHTHALMOLOGY

The Nautilus pre-operative assessment solution for ophthalmology frees up nursing time and capacity with an intuitive digital system that has been developed in partnership with surgeons, anaesthetists and nursing staff.

What once took half an hour of nursing time can now take a few minutes, thanks to the digital tool that enables patients to complete pre-operative assessment from the comfort of their own homes.

Staff have complete visibility of where patients are on the pre-operative journey, and can use the tool remotely to support on-site colleagues with phone-based pre-assessments. Pre-assessment nurses can use the solution to triage suitable patients more quickly, leaving more time to assess those with more medical need.

At a time when the surgical backlog needs addressing, it's perfectly suited for high volume, low risk patients, and it provides a seamless process that integrates with operational workflows. The web-based solution works with OpenEyes and other clinical systems, and can come with full integration and implementation support.

PROBLEM

Nursing teams spend time on pre-operative assessments that could be done by patients.

SOLUTION

Developed with clinicians, our easy-to-use solution enables patients to complete assessments remotely.

IMPACT

Nurses spend minutes on tasks that used to take half an hour, thanks to a paper-free tool that reduces the potential for surgery cancellation

The pre-operative assessment tool is releasing many hours of nursing time, on the types of patients that are seen in their hundreds across the NHS every day.

KEY FEATURES

Track and review patients

Nautilus pre-operative assessment for ophthalmology allows hospitals to monitor patients across their assessment journey. New procedure bookings trigger the assessment process, which clinicians and patients can complete and review online. Task reminders take healthcare professionals through the process, with a fitness-for-surgery RAG status indicating which patients are ready for surgery.

Customise to your local needs

Our technology is integrated with the patient record, making it easy to be part of the clinical workflow. Available on any device for patients and staff, it comes with risk and allergy statuses, customisable forms, and multiple review options. Nautilus pre-operative assessment for ophthalmology is a flexible solution that delivers the benefits of digital patient management.

Hospital benefits

- Help reduce the risk of cancelled procedures
- Greater visibility of pre-operative status
- Structured pre-assessment forms specific to gender, age and type of anaesthetic
- Less chance of transcription errors
- Digitised workflow tools that help ensure pre-op tasks are completed
- Compliant with clinical safety standards DCB1029 and SCC1060
- Granular reporting provides full visibility of status and potential obstacles

Digital benefits

- Removes the cost of and reliance on paper-based processes
- Tight integration with the EPR and existing workflows, using secure encrypted data
- Intuitive, requiring minimal training and support
- Configurable forms, with set templates available
- Scalable, flexible and interoperable – it can be used for all types of ophthalmology surgery

Patient benefits

- Patients can complete forms in their own home
- Online submissions reduce the need for hospital visits and the risk of infection
- Pre-assessment needs for each patient are displayed, saving time when completing the form
- Empowers the individual to be an active care participant and provides greater patient choice
